

REMARKS

In the Advisory Action mailed February 14, 2002, the Examiner refused entry of the amendment filed January 22, 2002, and cited "Mizuno et al. (5,441,802) as an example of the two-layer polypropylene films [that] have a mixed resin layer, comprising silicone oils, and zeolite (aluminosilicates) as being a reference, which would be of interest to applicants." This RCE requests entry of the prior amendment, which overcomes the prior art previously of record, so applicants take this opportunity to explain why Mizuno does not affect the patentability of the claims in this application.

The claims in this application are directed to a two-layer film in which the resin of the second, mixed resin layer consists essentially of polypropylene. Mizuno's surface layer contains both a propylene random copolymer, disclosed as Component A at col. 3, lines 28-62, and an acid-modified polypropylene, disclosed as Component C at col. 4, lines 24-61. Since Mizuno describes both of these components as "essential," there is no suggestion to leave either of them out of the skin layer. The claims in this application do not cover surface or skin layers which include significant amounts of a resin other than polypropylene and thus would not have been obvious in light of Mizuno.

Early action allowing claims 1-4 and 6-10 is solicited.

Attached hereto is a marked-up version of the changes made to the specification and claims by this amendment, captioned "**Version with markings to show changes made**".

In the event that the transmittal letter is separated from this document and the Patent and Trademark Office determines that an extension and/or other relief is required, applicants petition for any required relief including extensions of time and authorize the Commissioner to charge the

cost of such petitions and/or other fees due in connection with the filing of this document to

Deposit Account No. 03-1952, Ref. 361752000100.

Dated: March 12, 2002

Respectfully submitted,

VERSION WITH MARKINGS TO SHOW CHANGES MADE

In the Claims:

Cancel claim 5 without prejudice or disclaimer.

Amend claims 1 and 10 as follows:

1. (Thrice Amended) A two-layer laminate film, comprising:

a) a first resin layer comprising a polyolefin resin and having a surface treated by a discharge treatment method that imparts excellent printability to the treated surface; and

b) a mixed resin layer [comprising a polyolefin resin] in which the resin consists essentially of polypropylene formed on and adhered to a surface of said first resin layer opposite the treated surface having said surface treatment,

wherein the first resin layer and the mixed resin layer each contain up to 800 ppm fatty amides comprising stearamide or erucamide and the mixed resin layer contains a first additive material comprising at least one crosslinked silicone polymer in an amount of about 0.1% - 0.5% by weight of the mixed resin layer and/or at least one silicone oil in an amount of about 0.02% - 0.2% by weight of the mixed resin layer, and a second additive material comprising at least one amorphous aluminosilicate in an amount of about 0.10 - 0.50% by weight of the mixed resin layer.

10. (Twice Amended) The two-layer laminate film according to claim 1 or 2, wherein the [polyolefin] resin of the mixed resin layer consists [essentially] of a polypropylene homopolymer.
